

CONSULTANT PITCH PROPOSAL

Smart Client Enquiry Qualification

A guided, AI-supported enquiry pathway for i@work

BETTER-QUALIFIED ENQUIRIES

**FASTER, MORE FOCUSED
RESPONSES**

Controlled 8-12 month programme

Prepared by Prathibha Srinivas

Decision requested

Approve the discovery phase and confirm the internal stakeholders who should participate.

The business challenge

i@work is a B2B consulting and advisory company serving energy-sector organisations, project developers and institutional stakeholders. Prospects discover and evaluate its services through digital channels, making the enquiry process part of a B2B service e-commerce journey.

CURRENT CHANNELS

- Website
- Email
- Referrals
- Professional networks

COMMON INFORMATION GAPS

- Project location and technology
- Project stage and timeline
- Required support
- Decision authority

Business impact

- Repeated clarification creates avoidable administrative effort.
- Incomplete information slows meaningful responses.
- Inconsistent enquiries make comparison and prioritisation harder.
- Suitable opportunities may be delayed or missed.

The core problem

i@work does not yet have a consistent way to help prospects identify the right service and provide the essential project facts at first contact.

A guided enquiry pathway

The proposed pathway asks questions relevant to the service selected by the prospect, checks completeness and prepares the enquiry for human review.

1	2	3	4	5	6
Select need	Answer relevant questions	Submit project brief	Check missing information	AI classifies and summarises	Human review and action

Illustrative battery-storage enquiry

Prospect submits “We need support for a new battery-storage project.”	The pathway checks • Storage capacity • Grid-connection status • Commissioning date • Project location • Commercial or technical support
--	---

AI-supported internal output

- Suggested service category and structured project summary
- Missing information and suggested follow-up questions
- Draft clarification email for human approval

Boundary: the system does not provide technical advice, confirm service fit, set prices or make client commitments.

Practical tools, measurable outcomes

The solution can be built by connecting familiar components rather than replacing the organisation's full technology landscape.

WEB FORM	n8n WORKFLOW	AI MODEL	HUMAN REVIEW	CRM / EMAIL
Forms, Typeform or website	Validation, routing and integrations	Classification, summary and drafting	Approval before external action	Record, respond and track

Pilot KPIs

≥80%	Response time	Clarification cycles	Accuracy
enquiries with all required fields	Time to meaningful reply	Follow-up exchanges per enquiry	Classification and summary quality

Baseline and evaluation

Before the live pilot, three months of enquiry and email records should be reviewed to establish current completeness, response time, clarification exchanges, common gaps and recurring enquiry types. Pilot results should then be compared with this baseline and reviewed with the business-development and consulting teams.

Expected business value

- Less repeated clarification and more consistent information
- Faster, more focused responses and better prioritisation
- Improved visibility of recurring enquiry patterns

Potential financial impact

The estimates below demonstrate the calculation method. They are not a forecast and must be replaced with validated i@work data during discovery.

100	45 min	€60	40%
enquiries per month	current effort per enquiry	loaded staff cost per hour	assumed effort reduction

€21.6k	+	€30k	=	€51.6k
annual efficiency savings		estimated opportunity value		illustrative annual value

Base programme cost	Indicative net benefit	Indicative ROI
€30k	€21.6k	72%

Calculation notes

- Current effort cost: $100 \times 12 \times 0.75 \text{ hours} \times €60 = €54,000$.
- Efficiency saving: $€54,000 \times 40\% = €21,600$.
- Opportunity value is an assumption for enquiries that may otherwise be delayed or missed.
- ROI: $(€51,600 \text{ benefit} - €30,000 \text{ cost}) \div €30,000 = 72\%$.

A controlled 8-12 month programme

Compliance, human oversight and measurement are built into the delivery approach from the start.

GDPR CONTROLS	EU AI ACT CONTROLS
• Clear purpose and lawful basis • Data minimisation • Approved or anonymised records • Access, security and retention rules	• Document the AI risk assessment • Transparency when prospects interact with AI • Human oversight and output logging • Appropriate AI literacy and training

Delivery timeline

Month 1	Confirm scope, stakeholders, governance and compliance
Months 1-2	Analyse historical enquiries and establish the baseline
Months 2-4	Design, configure and test the guided workflow
Months 5-10	Run the live pilot, monitor KPIs and refine the process
Months 11-12	Evaluate results and recommend whether to refine, expand or stop

RECOMMENDED DECISION

Approve the discovery phase

Confirm the stakeholders, data availability and governance requirements needed to validate the business case and prepare the controlled programme.
