

SMART CLIENT ENQUIRY QUALIFICATION

A guided, AI-supported enquiry pathway for i@work

Controlled 4–6 month pilot

BETTER
ENQUIRIES

FASTER
RESPONSE

Presented by: Prathibha Srinivas

About i@work and the business challenge

ABOUT i@work

Energy and project consulting for B2B and institutional clients, including renewable-energy development, technical advisory and project-management support

Enquiries arrive through the website, email, referrals and professional networks.

COMMON GAPS

Location • Technology • Project stage • Timeline • Required support • Decision authority

The current challenge

- Prospects may not know which service fits.
- Initial enquiries may lack key project facts.
- The team repeatedly requests clarification.
- Responses may be delayed and opportunities missed.

They need to decide whether AI, automation, clearer content or process redesign is the right response

A guided pathway improves the first contact

The form adapts its questions to the prospect's selected service and answers.

Example branching logic

If “Battery storage” is selected, the pathway can ask about capacity, grid-connection status and commissioning date.

A practical, connected technology setup

Optional measurement layer

Power BI tracks completeness, response time, clarification exchanges, accuracy and user feedback.

Example: a battery-storage enquiry

PROSPECT SUBMITS

“We need support for a new battery-storage project.”

The initial message is useful—but not yet ready for qualification.

THE PATHWAY CHECKS

- Storage capacity
- Grid-connection status
- Commissioning date
- Project location
- Commercial or technical support
- Relevant decision-makers

AI prepares the enquiry for human review

SERVICE CATEGORY

Potential battery-storage advisory support

STRUCTURED SUMMARY

Project facts organised into a consistent internal brief

MISSING INFORMATION

Specific gaps highlighted before the team responds

FOLLOW-UP SUPPORT

Suggested questions and a draft clarification email

All outputs require human review. The tool gives no technical advice and makes no service commitment.

Expected value for i@work

- 01 ————— Less repeated clarification
- 02 ————— More consistent enquiry information
- 03 ————— Faster, more focused responses
- 04 ————— Better follow-up prioritisation
- 05 ————— Visibility of recurring enquiry patterns

KPIs to track during the pilot

PRIMARY TARGET

≥80%

of pilot enquiries contain
all required qualification
fields

Compared with the initial baseline

First-response time

Time from enquiry to meaningful
reply

Clarification exchanges

Average follow-up cycles per enquiry

Accuracy

Classification and summary quality

Business feedback

Usefulness rating from the team

The baseline makes improvement measurable

Review three months of enquiry and email records before the pilot.

CURRENT PERFORMANCE

- Current enquiry-completeness rate
- Current first-response time
- Average clarification exchanges

DISCOVERY INSIGHTS

- Common missing information
- Recurring services and enquiry types
- Data-access and GDPR requirements

Baseline → Pilot result → Evidence-based recommendation

Human control remains mandatory

HUMAN APPROVAL REQUIRED

- Technical advice
- Service-fit confirmation
- Pricing and proposals
- Contracts and external commitments

PILOT BOUNDARIES

- Approved or anonymised information only
- No restricted data in external AI tools
- No autonomous client decisions
- Uncertain cases escalated to the team

GDPR and the EU AI Act guide responsible use

GDPR CONTROLS

- Define a clear purpose and lawful basis
- Collect only necessary personal data
- Use approved or anonymised records
- Set access, security and retention rules

EU AI ACT CONTROLS

- Document the AI risk assessment
- Be transparent when prospects interact with AI
- Maintain human oversight and output logs
- Provide appropriate AI literacy and training

Human approval remains mandatory for technical advice, pricing, proposals, contracts and client commitments.

A focused 4–6 month pilot

MONTH 1

Discovery, baseline analysis and compliance review

MONTH 2

Design, configure and test the guided workflow

MONTHS 3–4

Run the live pilot and monitor agreed KPIs

MONTHS 5–6

Optional extension if enquiry volume is too low

PILOT END

Evaluate results and recommend the next step

“We cannot guarantee perfect accuracy, faster responses or increased conversion. The tool supports the process, but results depend on data quality, staff adoption and continued human oversight.”

Core duration: 4 months • Extend to 6 months only when more evidence is needed

Illustrative financial case

BASE-CASE ASSUMPTIONS

100 enquiries/month • 45 minutes/enquiry • €60/hour • 40% less clarification effort

BASE PROGRAMME COST	INDICATIVE NET BENEFIT	INDICATIVE ROI
€30k	€21.6k	72%

Illustrative—not a forecast. Validate volumes, costs, win rate and project value during discovery.

Approve a 4-month core pilot

Allow an optional extension to 6 months if enquiry volumes are insufficient for a reliable evaluation.

Why this duration?

Enough time to establish the baseline, test the workflow, collect live data and measure improvement.

Confirm stakeholders, data access and GDPR/EU AI Act requirements before launch.
